

MUHAMMAD SHARYAR

AI & AUTOMATION SOFTWARE ENGINEER

Email: sharyar.ali.104@gmail.com | Phone: 03028176591 | LinkedIn: linkedin.com/in/muhammad-sharyar-10b703208
Portfolio: shary.pythonanywhere.com | Location: Rawalpindi, Punjab, Pakistan

PROFESSIONAL SUMMARY

Ambitious and efficiency-driven Software Engineer specialized in Generative AI orchestration, custom Large Language Model (LLM) agents, Natural Language Processing (NLP), and multi-stack automation pipelines. Proven track record of architecting production-grade full-stack business solutions, deploying complex asynchronous workflow automation frameworks, and constructing low-resource offline speech-to-text systems. Focused on driving business scaling and automation metrics via scalable code, elimination of computational overhead, and high-impact software standards.

TECHNICAL SKILLS

AI & Automation:	LLM Orchestration (LangChain, LlamaIndex), Multi-Agent Cognitive Frameworks, RAG Pipelines, Harness Engineering, Workflow Automation (n8n, Make.com), Vector Databases (FAISS)
Machine Learning:	Speech/Audio Processing, Speech-to-Text (STT) Pipelines, Model Quantization, Zipformer, ONNX Runtime
Backend Engine:	Python (Django, FastAPI), Node.js, Express.js, RESTful API Design & Implementation
Frontend Stack:	React.js, Next.js, Redux, Tailwind CSS, HTML5, CSS3
Cloud & Databases:	Amazon Web Services (AWS EC2, S3, Lambda), MongoDB, PostgreSQL, SQLite, Git, CI/CD Prompt Testing

PROFESSIONAL EXPERIENCE

CodeCelix — AI Agentic Operator Intern

Jan 2026 – Apr 2026

- Engineered, deployed, and managed end-to-end autonomous multi-agent AI workflows and enterprise systems using n8n and LangChain to optimize business processes.
- Architected custom Retrieval-Augmented Generation (RAG) architectures, reducing prompt hallucinations and significantly increasing corporate database querying accuracy.
- Developed an automated CI/CD prompt testing layer ensuring prompt updates remained strictly deterministic, saving the engineering division up to 15 manual validation hours weekly.

Zeetelemarketing — Customer Service Representative (CSR) & Sales Closer

Jun 2022 – Oct 2024

- Executed international outbound high-velocity sales pipelines and technical pitch management to secure B2B/B2C conversions under rigid corporate performance quotas.
- Leveraged proactive communication and customer psychology techniques to handle complex rejections, successfully elevating team sales metrics.
- Maintained precise customer lifecycle data and CRM logging to ensure cross-department alignment on active pipelines and outstanding accounts.

ENGINEERING PROJECTS

Offline Real-Time Speech-to-Text (STT) Pipeline — *Python, Zipformer, ONNX Runtime*

- Architected a 100% offline vocal parsing infrastructure for Urdu stream transcription, removing third-party cloud runtime reliance and prioritizing absolute data isolation.
- Engineered a low-latency chunk-buffering memory model to process real-time streams seamlessly on restrictive consumer hardware without runtime exceptions.
- Applied model structural quantization, dropping hardware processing overhead by 40% and providing a standardized technical framework utilized for subsequent disconnected corporate AI applications.

End-to-End Multimodal AI Voice Assistant — *FastAPI, Python, WebSocket, LLM*

- Stitched real-time audio socket streams, automatic speech translation layers, core LLM text contextual evaluation, and synthetic vocal response generation into a single pipeline.
- Minimized data exchange latency using optimized continuous data transfer blocks, creating fluid human-to-machine vocal iteration loops.

Personal AI Assistant Bot — *LangChain, Python, Vector DB*

- Built an autonomous personal chat system utilizing stateful memory structures and contextually targeted operational agents to fulfill complex procedural workflows.

Enterprise Point of Sale (POS) & Billing Ecosystem — *MERN Stack (MongoDB, Express, React, Node)*

- Architected a massive retail orchestration tool incorporating rapid billing operations, relational item configurations, and instant invoicing layouts.
- Created automated stock status warnings via background data updates, minimizing inventory transaction mismatching across simultaneous checkout streams.

Peer-to-Professional Guidance Platform — *Django, Python, SQLite 3*

- Designed a matchmaking platform connecting students with domain experts, complete with real-time consultation scheduling modules and persistent secure messaging.

Photogrammetry & 3D Modeling Automation System — *Python, Computer Vision, AWS S3*

- Developed a processing engine converting layered 2D panoramic image streams into dense 3D dimensional representations utilizing programmatic spatial orientation steps.

Comprehensive Student Management System — *C++, JSON (CLI app)*

- Crafted an academic management platform coordinating secure grading portals, administrative oversight controls, and automatic visual attendance dashboards.

EDUCATION

Bachelor of Science in Software Engineering (BSSE)

2021 – 2026

SZABIST, H-8/2, Islamabad, Pakistan

Intermediate in Computer Science (ICS)

2019 – 2021

Jinnah Institute of Science, Information Commerce and Technology, 6th Road, Rawalpindi, Pakistan
